- ✉ yigeng77@gmail.com
- 🌐 github.com/AnnikaGeng
- 📍 Salzburg, Austria · CET

PERSONAL

- **Based in Salzburg, Austria (CET)**
— remote, full overlap with European hours
- **Work permit:** Rot-Weiss-Rot-Karte plus — unrestricted access to the Austrian labour market, **no sponsorship required**

LANGUAGES

- **English:** fluent, daily working language in my current team
- **German:** B2
- **Mandarin:** native

STRENGTHS

- **Ships features whole:** schema → REST API → UI → tests → deploy
- **Self-directed in an async team:** written specs and design notes, PR-based review, progress and blockers raised in writing
- **Production ownership:** I stay with what I build, through the logs and the bug reports that follow

PROFILE

Full-stack developer with **3 years of production experience:** **TypeScript/SvelteKit** on the front, **Java (Micronaut) microservices on PostgreSQL** behind it. At Salzburg AG I am a core-team developer on **Enox.share**, a platform running in production for **143 energy communities** with **3,000+ metering points**. I ship features whole — database schema, REST API, responsive UI, tests — and because I build both sides of the same product, I design endpoints knowing exactly how they will be consumed. I also keep the live system healthy, through the logs and the bug reports that follow a release. Certified **Microsoft Azure AI Cloud Developer (AI-200)**; former product manager.

WORK EXPERIENCE

Salzburg AG · Enox.share (energy communities platform) Dec 2023 – Present

Software Developer · Salzburg, Austria

Developer on the core team of a **production microservices platform** for **143 energy communities** with **3,000+ metering points**: contracts, billing, data pipelines.

Frontend & UI

- Build the **SvelteKit/TypeScript self-service UI** used daily by the admins of **143 energy communities**: community management, data visualisation and invoice generation.
- Built **billing and invoice views** that handle many state combinations, **complex filtering** and **overlapping validity periods**, with large data tables that stay responsive.
- **Refactored the platform's form and table components** into reusable building blocks; contributed **~20% of the shared Storybook library** other developers build on.
- Improved **load performance** with client-side caching (**TanStack Query**); **responsive design** so the key views work on desktop and mobile.

Backend & APIs

- Build the **Java/Micronaut REST APIs** that power this UI, in a **hexagonal architecture** with separated domain and adapter layers, on **PostgreSQL** with JPA/Hibernate and **Liquibase** migrations.
- Keep a **large set of REST endpoints stable in production** across releases and schema changes — additive changes and migrations sequenced so existing clients keep working.
- Designed and built the **metering point assignment logic** with validity periods; live in production for 3,000+ metering points.
- Develop features on the team's **Dapr pub/sub** infrastructure: publish events on state change and consume them in downstream services, writing the derived records with **transactional writes and optimistic-lock retry** so concurrent updates do not overwrite each other.
- Identified that startup-loaded CSV reference data blocked a user requirement; proposed and carried out the **migration to PostgreSQL**.

SKILLS

Frontend

TypeScript, SvelteKit, TanStack Query, Storybook, responsive design, component-driven UI; React (personal projects)

Backend

Java (Micronaut), REST API design, OpenAPI, Gradle (Kotlin DSL), hexagonal architecture; Node.js / Express (personal projects)

Data

PostgreSQL, SQL, JPA/Hibernate, Liquibase, relational modelling, schema migrations, JSON/XML

Architecture

Microservices, event-driven systems (Dapr pub/sub), async pipelines, optimistic locking, backward-compatible API changes

Cloud & Observability

Docker, Azure Container Apps, CI/CD, Git, Grafana/Loki, OpenTelemetry, Cloudflare Workers & KV

Testing & Quality

JUnit, unit & integration tests, Playwright (E2E), TDD, code review

Ways of Working

Remote/async collaboration, written design notes, agile/Scrum, stakeholder communication in English & German, AI-assisted development

EDUCATION

MSc Information Systems for Business Performance

University College Cork · Ireland
2022 – 2023

BA German Linguistics

Southwest University · China
2015 – 2019

WORK EXPERIENCE (CONT.)

Salzburg AG · Enox.share (continued)

Dec 2023 – Present

Software Developer · Salzburg, Austria

Quality, Operations & Remote Delivery

- **JUnit unit and integration tests** plus **Playwright E2E** coverage on the main user flows, so refactors and dependency upgrades ship without regressions.
- Keep the platform healthy in production: watch **Grafana/Loki** logs and **OpenTelemetry** traces, analyse exceptions and fix causes rather than symptoms.
- Services run in **Docker** on **Azure Container Apps**, released through the team's **CI/CD** pipelines; **Dependabot** upgrades keep them current.
- **Review-driven, written delivery** in an agile team: specs and design notes in writing, alignment with billing and sales stakeholders, work picked up and driven without day-to-day supervision.

Medliner

Jul 2020 – Dec 2021

Product Manager · Beijing, China

- Led a **cross-functional agile team** to deliver a patient recovery app for **100+ seed users**.
- Designed a user rewards system, improving active user retention by **10%**.

Modao

Oct 2019 – Jul 2020

Product Assistant · Beijing, China

- Shipped features for a **top-3 online prototyping platform** in China (**1.3M users**).
- Drove iterative improvements from structured user research with **400+ users**.

PERSONAL PROJECTS

Fitness Landing · React + Serverless

2025

React · Cloudflare Workers · KV

- **React** landing page with a contact endpoint on **Cloudflare Pages Functions** (Workers runtime): validates input, returns 400 on bad requests, writes valid submissions to **KV storage**; deployed on git push.

NASA APOD Gallery · REST API

2023

Node.js · Express · SQL

- **Node.js/Express** API split into api and database layers: pulls the daily image from the **NASA public API**, stores file and metadata, serves it with **LIMIT/OFFSET pagination** and parameterised SQL, with upstream and server errors handled separately.

CERTIFICATIONS

Microsoft Certified: Azure AI Cloud Developer Associate (AI-200)

2026

Microsoft
